

KULURI

No harvest lost
for lack of hands.

EU Agri Hackathon · Challenge 3: Flowing Data, Empowered Collaboration

Co-founders: Linda Angulo López · Maria Filippou · Ayushman Bhaba Padhy · Juan Zotes Orcajo

5:47 a.m., Kastelli Valley, Crete

Nikos, 35 · seasonal worker
Last season: no contract, 3 days unpaid.

Maria · organic olive grower
Trees 100+ years old. Needs 4 workers in 2 weeks.

Maria and Nikos are not alone

95k

olive families in Crete

10k+

workers missing each harvest

39%

of EU farmers share no data digitally

Since 2025, CAP payments depend on fair labour (social conditionality).
Proof is still on paper.

Where farmers and workers:

1. find each other,
1. agree, and
1. hold to it.

FIND

Profiles, job posts, matching

AGREE

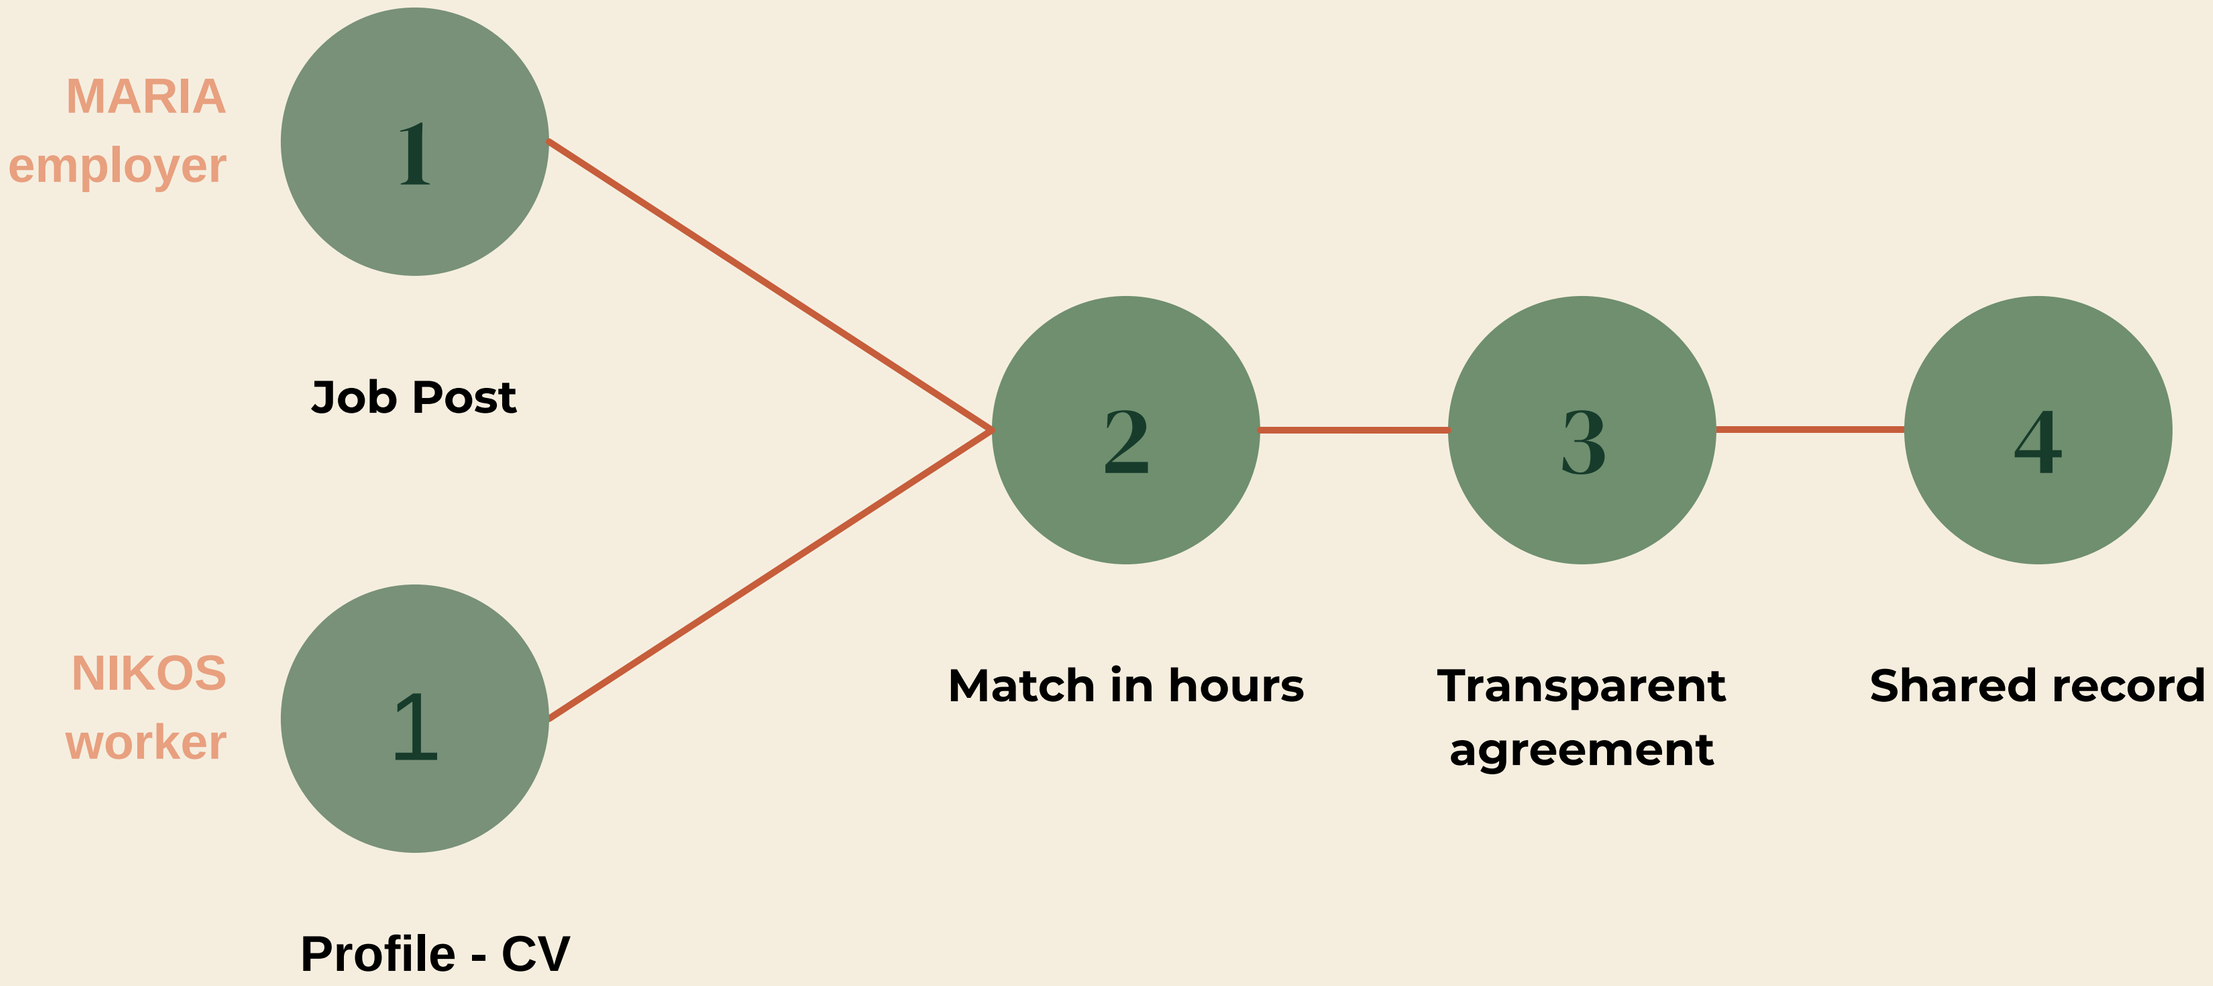

Clear terms before anyone shows up

HOLD

Signed, recorded, can't be quietly changed

Everything else follows from these three.

What changed for Maria and Nikos

	BEFORE	WITH KULURI
Finding workers	weeks	**hours**
Terms	verbal	**transparent**
Worker pay	unclear	**agreed upfront**
Proof	paper	**can’t be changed**

Growing harvest by harvest in Crete

Workers matched · Farms active

Free for people. Paid by those who benefit.

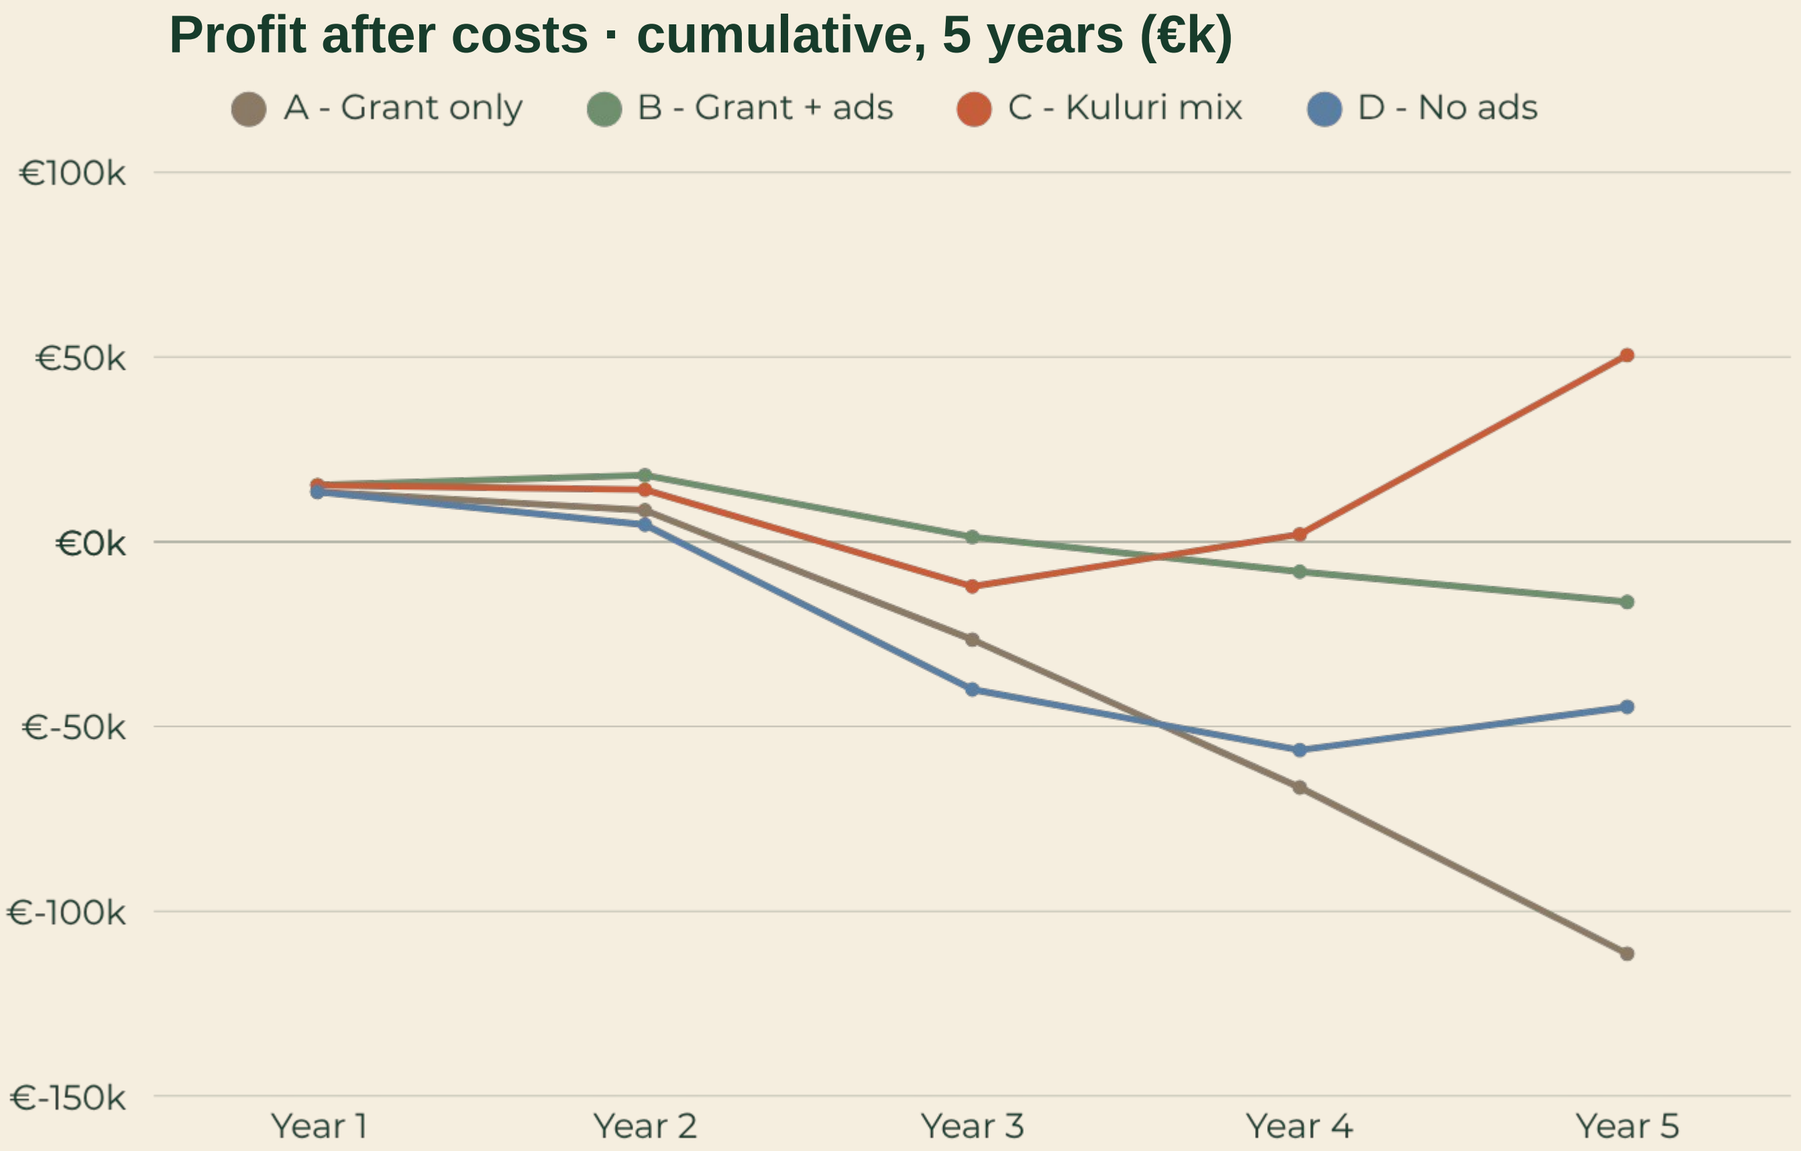

Launch: EU grants (e.g. ESF+, EIT Food) · Local business ads (~€360 / season)

WHO	WHAT	PRICE
Workers	Fair work + own agreements	**Always €0**
Farmers	Agreements + season report	**First 10 free, then €0.20 each €8 / season (year 1 free) or Prime €10 / month**
Co-ops	Full crews on all member farms → bigger harvest → more oil for the co-op	**Year 1 free then €1,200+ / year**

Grants launch us. The agreement keeps us running. Workers always free.

4 funding paths: which one should we bet on?

¿POSSIBLE BACKUP?

+€50k

C · base case, year 5

A · Grant only
Grant covers part of costs

B · Grant + ads
Ads alone don't cover costs

C · Kuluri mix
Grants + ads + agreements + reports

D · No ads
Profitable from Y5, slower

Ads also bring local businesses customers in the low season · Illustrative figures

Next October, 5:47 a.m.

Nikos: “I’m coming back, Maria.”

No harvest lost for lack of hands.

Our ask: €20k + 1 pilot co-op → live for the Oct 2027 harvest
KULURI · a Social Cooperative Enterprise

Next 12 months

BACKUP

Nov 2026 – Feb 2027	Test with Maria and a few workers in this harvest
Mar – Jun 2027	Apply for the grant, sign the pilot co-op
Jul – Sep 2027	Train the co-op, bring its members on board
Oct 2027	**First full harvest with Kuluri**

Next October, 5:47 a.m.: Nikos is back.

How Hold works

BACKUP

1

Maria and Nikos accept the terms in the app

2

Kuluri stores a fingerprint of the agreement, not personal data

3

Both see the same version. Any change shows.

4

Export it for ERGANI or a CAP check when needed

No crypto · no personal data on the chain · ≈ €0 per agreement

Challenge 3: data control

BACKUP

PAIN	KULURI
Fragmented calls	**One shared flow**
Opaque decisions	**Consent by design**
Locked platforms	**Portable records**
No feedback loop	**Live local insight**

Competition: find · agree · hold

BACKUP

	FIND	AGREE	HOLD
Job boards, Facebook groups	✓	✗	✗
WhatsApp, phone calls	✓	Verbal only	✗
Agro-U (Greece)	✓	✓ hiring papers	Official filing
ERGANI app (Greek state)	✗	✓ jobs ≤ 2 days	✓ state record
Farm-work voucher (ergósimo)	✗	✗	Paper voucher
KULURI	✓	✓ **whole season**	✓ **shared, can't change**

Others do one or two. Kuluri does all three.

ERGANI app: July 2026, contracts up to 2 days · Agro-U: matching + hiring paperwork (Thessaloniki, 2020)

How we estimated the numbers

BACKUP

1 · Market size (TAM → SOM)
95k olive families → 28.5k hire → 9k users by Y5

2 · Adoption curve (Rogers)
Innovators + early adopters = 16% by Y3

3 · Freemium conversion
3% pay for Prime (benchmark 2–5%)

4 · Comparable prices
Farm software €450–950 / year → co-op €1,200

5 · Value for co-ops
Pays back if harvest grows 0.4% (96 t × €4.60/kg)

6 · Bottom-up costs
Part-time developer ≈ half a Greek salary (€40k)

7 · Grant probability
€20k / year, 70–80% chance (ESF+, EIT Food)

8 · First Chicago method
Bear 30% · Base 50% · Bull 20% → C: +€21k

9 · Monte Carlo (10,000 runs)
C profitable in year 5 in 94% of runs

10 · NPV at 40% (VC hurdle rate)
C: +€13.5k · A and D negative

C: +€50k in base case · 47% chance all early losses are recovered by year 5

Costs and risks

BACKUP

YEAR 1 COST

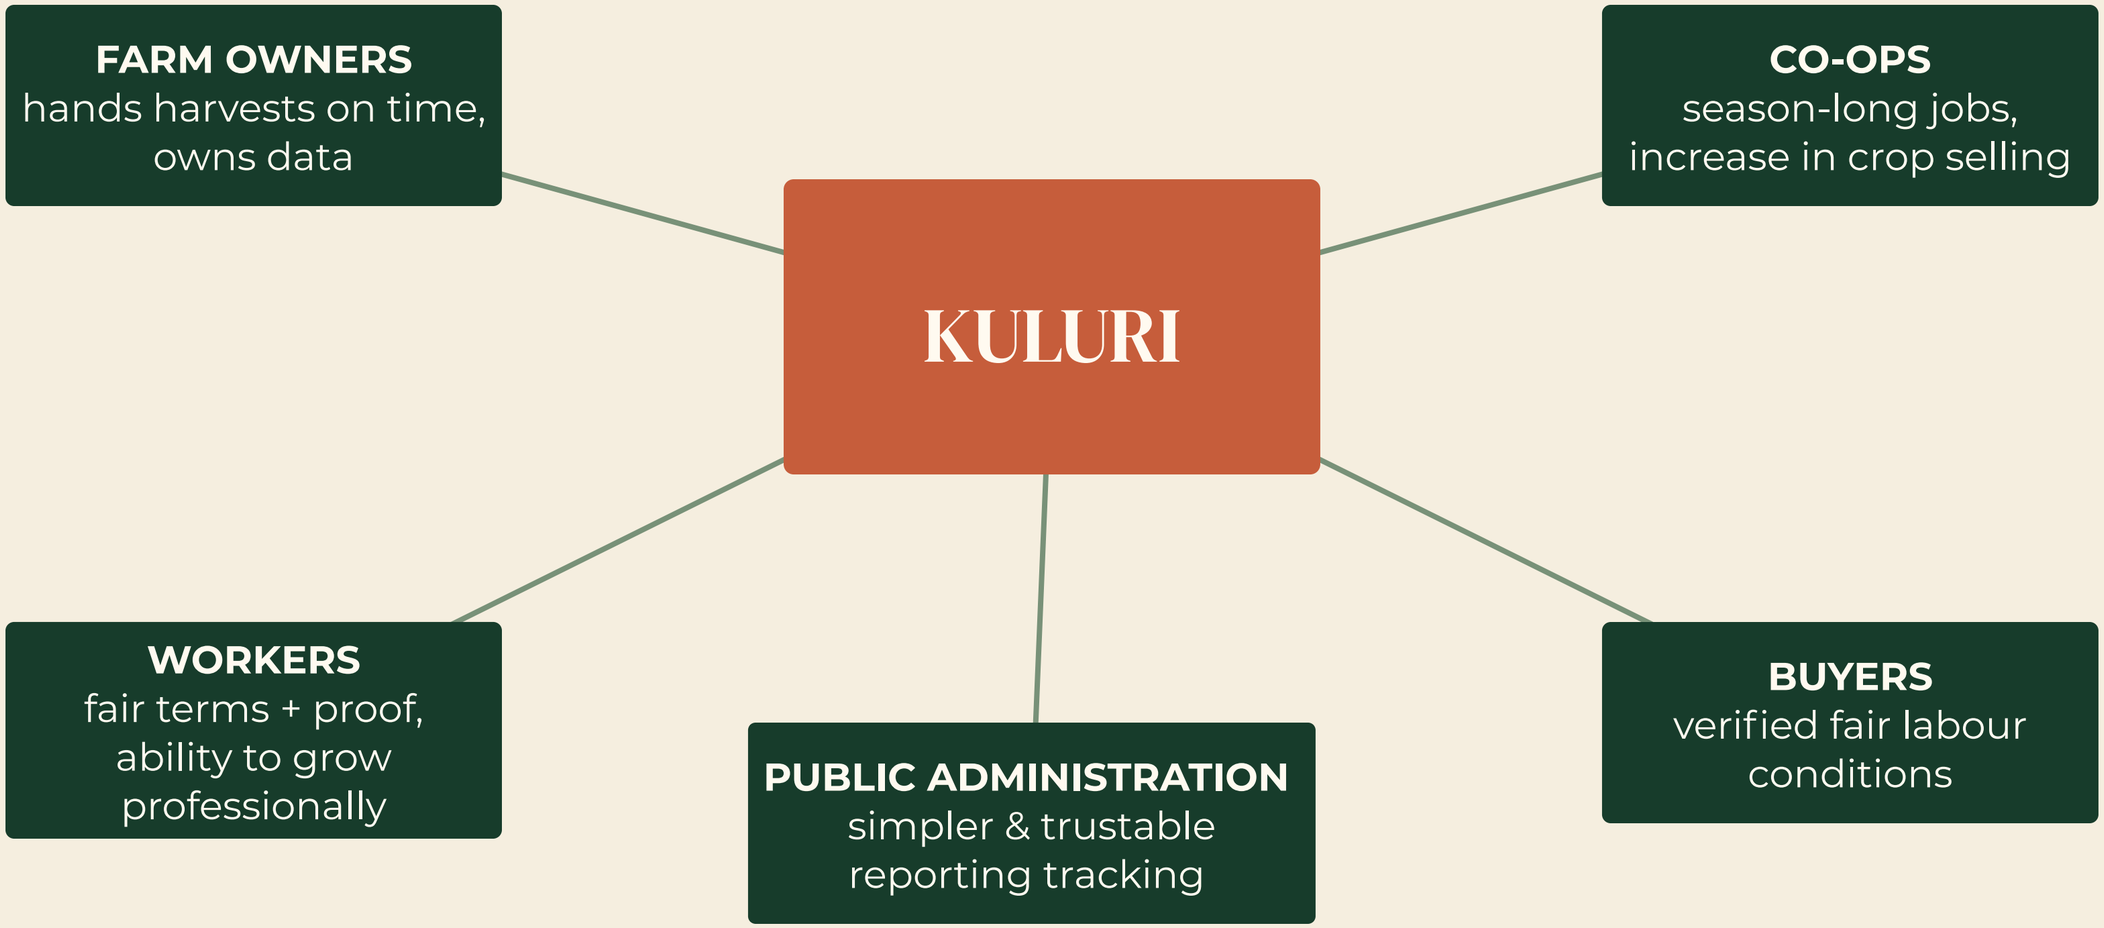

Company + accountant	**€2,500**
Legal + GDPR	**€1,500**
Tech, marketing, tools	**€2,500**
Total	**≈ €6,500**

RISK ANSWER

Low adoption	Co-design in villages
Data misuse	Consent + minimisation
Seasonality	Co-op subscriptions
Trust	Human support

Everyone in the chain will win

BACKUP

Who advertises on Kuluri

BACKUP

Olive mills	Win farmers early	**Rooms to rent**	Empty in winter
Farm stores	Pre-harvest sales	**Transport**	Reach far groves
Machine repair	Urgent fixes	**Workwear**	Gloves & boots
Accountants	Register workers	**Tavernas**	Feed harvest crews
Oil buyers	Buy after milling	**Money transfer**	Send pay home

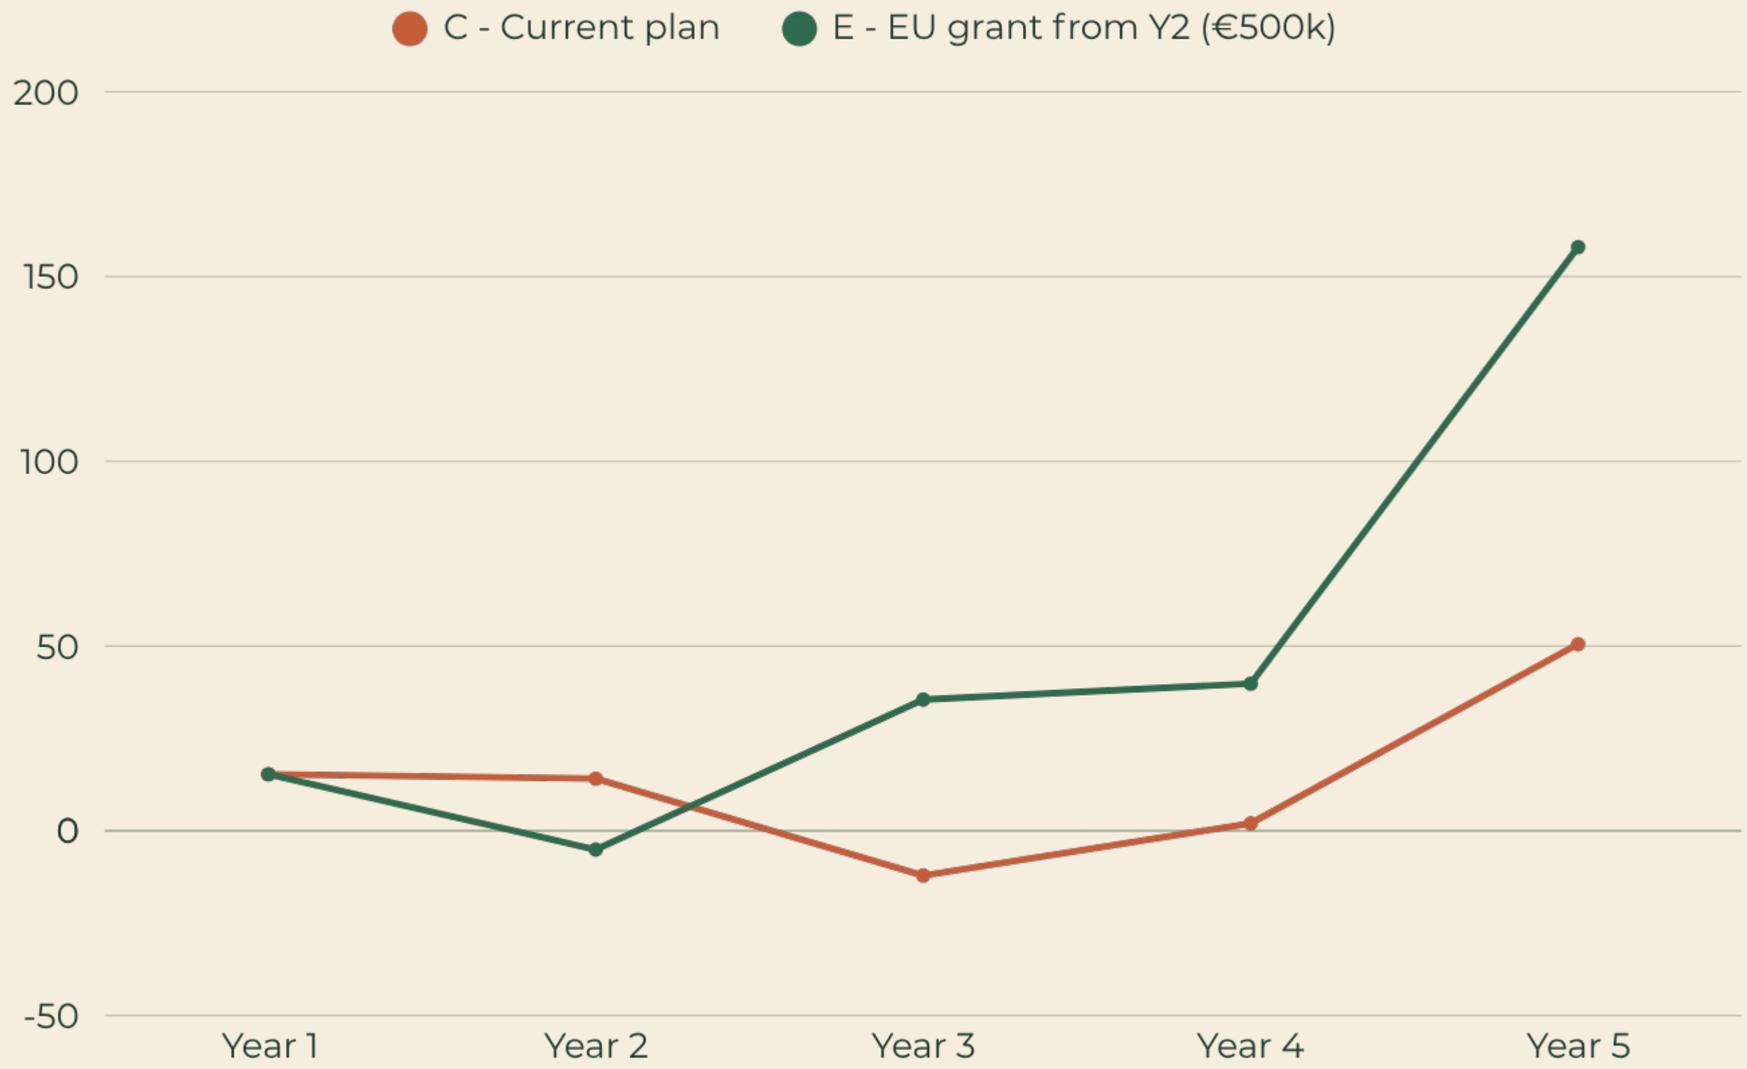

~€360 / season · 6 → 60 → 120 advertisers (Y1 → Y3 → Y5)

No loans, no gambling

If we win: bigger market, bigger profit

BACKUP
